

Fin-tech Slo-D Tech Rig and the Berkley Gulp 3" Fry

When fishing with the Slo-D Tech Rig try varying your leader length by simply sliding the bobber stop up or down your line to adjust the distance between your Tech Stik and Slow Death hook. I have had the greatest success with leader lengths between 4' to 6'. Let the fish tell you the length they prefer.

There is no need to use a real worm with Slow Death hooks. Try adding a bead above the hook and simply thread on a Berkley Gulp 3" Fry as you would a real worm. The Gulp 3" Fry is the perfect size and needs no trimming. Last summer this technique out fished live bait in my boat.
